

Vacancy

Railway Signalling Engineer

RB Rail AS office in Riga, Latvia

Rail Baltica is a once-in-a-lifetime infrastructure megaproject – if you're looking for meaningful job in an international setting, look no further. This is where you can make an impact to be proud of.

You will lend a hand in integrating the Baltic States into the European rail network and building a new economic corridor to bring long-term benefits to the Baltic region and its people. You will work with a cross-border team of more than 200 brightest minds in the industry.

We are looking for a new enthusiastic colleague to join our growing team in a position of **Railway Signalling Engineer**.

Job summary

The primary responsibility of the Railway Signalling Engineer is coordination of Rail Baltica signalling system deployment starting from procurement till putting it in operation. The geographical area of responsibilities covers the whole Rail Baltica project corridor: Rail Baltica main line with a cross-border to Poland and various Rail Baltica facilities such as freight yards, terminals and maintenance facilities.

What's in it for you

A job with purpose and impact

Exceptional international project experience

Innovation-driven work

Professional and self-development

Flexible work arrangement

Benefits and Bonus programme

Supportive network of professional colleagues

Competitive salary

We will entrust you to

- Elaboration and review of project technical documentation, i.e. requirements, specifications, technical solutions, technical designs, bills of quantities.
- Reviewing deliverables produced by designers, suppliers and consultants involved in the project.
- Technical coordination of signalling system deployment.
- Close cooperation with project stakeholders: National Implementing Bodies, Project Engineer and Works Contractor.
- Participate in project planning and implementation tasks.

To succeed, you should have

- Bachelor's degree or equivalent in Electrical Engineering with the specialisation in the field of Railway (preferable) or IT&T.
- At least 5-8 years of experience in railway signalling system engineering, design or construction supervision, testing and acceptance.
- Experience in several ETCS and IXL projects, international experience is a plus.
- Deep understanding of ETCS and IXL operational scenarios and functionality.
- Understanding of railway engineering processes, CSM-RA, RAM, Safety and Interoperability (TSI-CCS).
- Outstanding organizational abilities, proactive and energetic individual who has technical and analytical mind and can see both the large picture and would not hesitate to dig in for details.
- Well-developed communication skills, with ability to effectively interact in person and remotely with both, the business partners and internal technical team members, willingness to work in a team environment.
